Createx Airbrush Colors are renowned for their vibrant color, consistent performance and incredible value. They're an excellent choice when high coverage, durability and bright colors are needed. **Createx Airbrush Colors** are made with lightweight pigments and a unique resin that works on a wide variety of surfaces, including fabrics on which colors have a soft-hand feel. **Createx Airbrush Colors** are water-based, acrylic airbrush paints tested to meet ASTM D-4236 standards.

AIRBRUSH COLOR TYPES

Transparent – Bright vibrant colors for white or light colored surfaces.

Opaque – Solid colors for dark or light colored surfaces.

Fluorescent – Bright neon colors for white or light colored surfaces.

Pearlized – Shimmering metallic colors which cover both light and dark colored surfaces.

Iridescent – Luster colors which change hues at different angles of light.

CREATEX ADDITIVES

4008 Restorer – A water-based, biodegradable cleaner used for soaking airbrush and spray-gun parts after painting.

- Partially dissolves dried paint allowing for easy clean-up with soap & water.
- Use as a soak for metallic parts: nozzle, needle, cup. Dissolves soft-plastics. Keep away from non-PTFE coated O-rings.

4012 High Performance Reducer – A premium reducer for thinning water-based paint.

- Generally added 10 - 25% per volume to paint. May be added in greater quantities to achieve best viscosity for atomization of paint.
- For use with Createx Airbrush Colors, Wicked Colors, Auto Air Colors, Createx Illustration Colors and AutoBorne Sealers.

4030 Mix Additive – Water-based, polyurethane clear used as a mix additive for improved spray performance, adhesion & coating durability.

- Mix 4030 10% or more with Createx Airbrush Colors for improved performance when painting non-porous, hard surfaces.
- 4030 works as an adhesion promoter when mixed with Createx Airbrush Colors, perfect for direct application to plastics, vinyl and most any hard to paint surface.
- Createx Airbrush Colors dry to a much more durable coating when mixed with 4030.
- For use with Createx Airbrush Colors, Wicked Colors, Auto Air Colors, Createx Illustration Colors.

5601 Transparent Base – Colorless resin base of Createx Airbrush Colors.

- Use as a light protective coating which may be applied over colors. For washfast textile painting, heat-cure Transparent Base after application over colors.

- Use for preparation onto fabric prior to painting to prevent fabric krep from interfering while airbrushing. Heat-cure Transparent Base prior to applying colors.
- Use as a thinner by mixing with Airbrush Colors to improve flow and spray performance.

5603 Matte Top Coat – Water-based, matte clear.

- Use as a protective coating which creates a matte finish.
- Best used for application on fabric, leather and interior application.

5604 Gloss Top Coat – Water-based, gloss clear.

- Use as a protective coating which creates a gloss finish.
- Best used for application on fabric, leather and interior application.
- Helps maintain proper working condition of airbrush or spray-gun by preventing build-up of dried paint.

5618 Airbrush Cleaner – A mild, water-based solvent cleaner for rinsing colors while painting.

- Rinses paint from airbrush or spray-gun more effectively compared to water when changing colors.
- Helps maintain proper working condition of airbrush or spray-gun by preventing build-up of dried paint.

AutoBorne Sealers – Primer for use when painting plastic, glass and hard-surfaces.

- Sealers adhere direct to any surface with excellent adhesion creating an excellent foundation to paint on.
- Sealers dry quick to a flat surface and shave well when dry sanded with 1000-grit or finer paper.
- Sealers are available in multiple colors for color-keying with Createx Airbrush Colors resulting in improved coverage and quicker drying times.

AIRBRUSH USER GUIDE

FABRICS – including 100% cotton, 50/50 blends, denim, sweatshirts and most natural fibers.

- For best results wash item first to remove sizing, mill finishes or dirt.
- Allow colors to dry thoroughly. Time varies depending on application.
- Apply 5601 Transparent Base for preparation onto fabric prior to painting to prevent fabric krep from interfering while airbrushing. Heat-cure Transparent Base prior to applying colors.
- For washfast permanence, heat-set Createx Airbrush Colors after air drying by either:
 - Use a clothing iron for two minutes at 300°F with a protective cloth between colors and iron.
 - Use a shirt press for 20 seconds at 325°F.

LEATHER

- Work in extremely light coats. Thick coats are more prone to cracking and flaking. Multiple light coats create a stronger, more flexible coating which bends with leather.
- Start by cleaning leather, use soap and water and mineral spirits / isopropyl alcohol.
- Allow each coat to dry prior to applying next coat.
- Once dried, cure colors through gentle exposure to heat from a heat gun or hair dryer for approximately 5 minutes. Do not get colors too hot. Warm to the touch works. If curing with an iron, set at 225°F and use protective cloth between paint and iron.

WOOD

- Prepare by sanding.
- Start with AutoBorne Sealer or apply Airbrush Colors direct to wood.
- Createx Airbrush Colors may be top-coated with a nitrocellulose lacquer.

PLASTICS, VINYL & GLASS

- Start with AutoBorne Sealer for foundation which adheres excellent to plastics & non-porous surfaces.
- Mix 4030 with Createx Airbrush Colors for improved adhesion and durability.

SET-UP

- 0.5mm tip-sized airbrush sprayed at 45+ psi.
- 0.35mm and smaller tip-sizes sprayed at lower psi settings thin colors with 4012 High Performance Reducer or 5601 Transparent Base.
- Textile & Fabric: Cure with heat for washfast permanence.
- Plastics, Glass, Vinyl: Mix with 4030 for adhesion & durability.
- Top-Coat (optional):
 - 5603 & 5604 Createx Top Coats are for fabric and light hobby application.
 - 5601 Createx Transparent Base may be used as protective coating for t-shirt and fabric art.
 - Use a urethane clear for exterior and durable finishes. Createx Airbrush Colors are compatible with all types of urethane & polyurethane clears as well as many other clear types.
